## PROJECTS

---

### FilmFanatic | *Java, JavaFX and FXML*

- Collaborated on a movie management app designed to help users organize/track their watched movies and movies they plan to watch
- Applied MVC Architecture to follow architectural pattern and promote separation of concerns/code organization
- Implemented Authentication/Security by creating a login page with secure password handling and ensures user data privacy and protection
- Incorporated exception handling to allow user to explore application without any errors
- With Database Integration, can store movie data securely and allow users to add, remove and manage their movies
- Adhered to SRP and DRY principles for clean and maintainable code

### Car Rental | *HTML, CSS, Java*

- Responsive web application designed for users looking to rent cars. Incorporated modern web design principles technologies to provide an engaging and user-friendly experience
- Responsive and optimal viewing on various devices
- Incorporated mobile friendly navigation menu and easy to use nav menu overall for desktop too
- Implemented car rental form for users to input location, pickup date, and return date for rental
- Utilized ScrollReveal library to create smooth scroll animations to enhance user engagement

### Personal Portfolio | *HTML, CSS and Javascript*

- Used HTML to structure content of website, defining sections, headings, etc
- Employed CSS to style font, colours, spacing, layout, and responsive design rules, ensuring user-friendly interface
- Utilized Javascript for interactivity and functionality. Included a function to toggle mobile navigation open/closed, enhancing UX on smaller screens
- Administered media queries to enable responsive design
